Package details

The FX-500 sits within its own flight case, with wheels for easy mobility. Everything needed to run the machine, apart from snow fluid, is included in the case.

Technical Information

Weight	37.2kg
Dimensions	60cm x 55cm x 65cm
Input voltage	220 - 240V
Amps	3.8A
Rated power	900 W
Fluid Used	ProFlake RTU
Fluid consumption	400 ml/min
Fluid tank capacity	20 Litres
Control	Manual
	Timer
	DMX 512

Includes

- FX - 500 Machine
- 10 metre Hose
- Snow head nozzle
- Timer unit
- Power Cord

Description

The FX-500 is an electrically powered falling snow machine. Snow is created from the head at the end of a 10-metre hose, this can be mounted using the attached bracket. It delivers realistic, dry foam falling snow.

The machine delivers snow at a consistent flake size, which can be adjusted using the onboard controls. The output throw of the snow can also be adjusted giving a maximum throw of approx. 6 – 8m.

The FX-500 can be controlled via a bluetooth timer to create specific on / off interval patterns. This timer can be supplied at extra cost.

There is a basic timer built into the unit which can deliver snow with 6-minute intervals.
